

SAMSACU SUSTAINABLE NUTRITION

SamDAQU has a canteen, which has been operating on the university campus for many years to provide cheap and quality food to its staff, i.e. professors, teachers, staff and students, but today it is in need of renovation. A new educational building for 3500 seats is being built on the place of the building. The basement of the building is planned to house a kitchen with modern amenities.

Today the university community meets its food needs through campus catering establishments. These catering establishments are cheaper for students and pay serious attention to quality, and the university co-operates with them.

The population of the university is 7,042 people.

The total volume of waste is 365.4 tonnes.

Food waste 91.25 tonnes

0.012 tonnes per person

Waste generated at the university is sent for general recycling
